

BV2500 is our handmade stainless steel post for glass railings made of 304 stainless steel. Designed by our team of installers and manufactured by hand in our factory. We also offer a side-mounted variant.

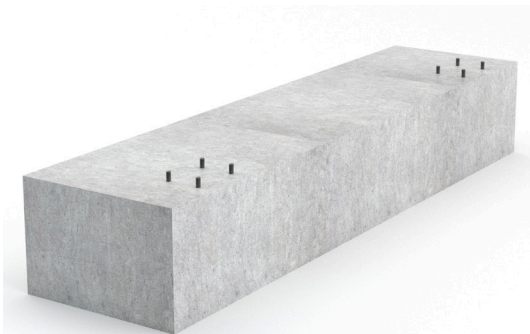

BV2500 is installed with chemical or mechanical anchors and it can hold a glass of 12mm-25.52mm. It provides the flexibility of installation as it can be used on balconies, stairs, and even for awnings and canopies as it is extremely durable. Securing the glass is achieved with custom-made standoffs / glass adapters. The exceptional corrosion resistance makes this system a practical choice for different environments. For superior corrosion resistance the adapters can be made of 316 stainless steel upon request. The system can be finished with a decorative aluminium slimline handrail (BV6023) for limitless look or with a standard square (BV6024) or round handrails (BV6022).

BV2500 is a good choice for staircases, glass railings, and balustrades.

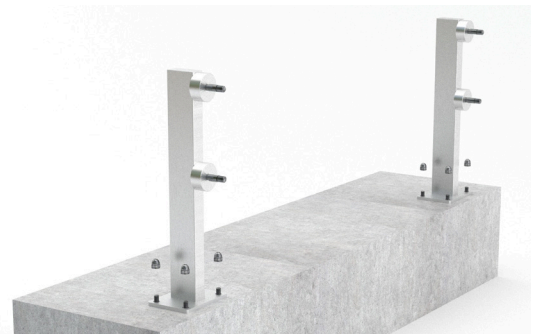

/ INSTALATION GUIDE

Full certification available on our website www.barosvision.com/en/

1. Drill, vacuum, insert glue and chemical anchor.

2. Mount and secure the columns.

3. Place plastic protectors and insert the glass

4. Secure the glass with the top part of the standoffs.
